

Certified Scaffolding

brief description

Secure work at a height is a profession in its own right. One you have to learn. But also to monitor and inspect. Do we work according to regulations? Are the right materials and parts being used? Do we build according to prescribed construction? Every year, hundreds of serious accidents happen in the immediate working environment of the scaffolder, of which 10 to 30 are fatal. training of Monitoring and Inspection your employees will help preventing these accidents.

who should attend?

Corporate Training

Roustabout/Roughneck

Electrical Safety

Scaffold Inspector

Certified Safety Specialist

Certified EHS Supervisor

objective

This training teaches employees who are responsible for the inspection and/or transferring of scaffolds, to expertly inspect these on quality and safety, according to current standards and regulations. In the case of a complex scaffold, it may be deviated from the construction drawing and there may be modifications. The achieved (business) certificate of professional competence is your proof of an employee who meets the requirements according to the Scaffolding directive.

content

During the training, the following components will be dealt with:

- Assessing and releasing of the strength, rigor and stability of standard scaffolds on the basis of drawings;
- Inspecting scaffold material on the basis of actual criteria and standards;
- Inspecting and assessing the safety of scaffolds in all stages;
- Signaling corrective measurements;
- Providing insight into corrective and/or relative constructive materials through sketches;
- Legal and liability aspects of scaffolding.
